

Notice of Hiper APAR OA18465 for DFSMSHsm V1R8
– Possible Data Loss

At SHARE User Events in Tampa, FL (February 12 to 16, 2007) Steve Huber, IBM DFSMS Software Service representative, informed the audience that a Hiper APAR for DFSMSHsm was issued. With further research, we found that the original problem APAR number is OA18372. The following text is taken directly from the error description of that APAR.

Recall and Recover fail with the following error messages:

`IOS000I EOD`

`ARC1168I RC16`

The tape from which the dataset is being recalled/recovered was previously used as output by recycle. The recycle failed due to an error on the input tape that inadvertently caused DFSMSHsm to lose knowledge of the logical EOF on the output tape. As a result, the next time that DFSMSHsm attempts to write to the recycle output tape, it will write from load point, overwriting data previously written to the tape.

In some instances, the recall/recover may complete successfully, despite receiving the `IOS000I EOD` message. In others, the recall/recover will fail with the `ARC1168I rc16` message. Any datasets receiving the `ARC1168I rc16` failure are irretrievably lost and must be recovered from a backup copy.

Recycle failures currently known to be associated with the subsequent overwriting of data are identified with `ARC0833I rc31`. Other possible conditions could occur.

If you experience this problem, hold RECYCLE and mark any partial ML2 and backup tapes full using the `DELVOL volser MIGRATION(MARKFULL)` or `DELVOL volser BACKUP(MARKFULL)` command as appropriate (see APAR OA18372). The APAR also states that the HSM command audit mediacontrols is not capable of repairing the overwritten tapes.

IBM has a tape assessment tool available in APAR OA18465 to help you determine whether you have tapes that are affected by this error. Report any tapes suspected of having been overwritten to IBM Software Support for further analysis and data recovery assistance.

Resolution: Apply IBM's PTF UA30130 to prevent this error condition.
